

Google Cloud Accelerated Onboarding – Notes

1. Overview of Accelerated Onboarding

Accelerated onboarding ensures a smooth, secure, and scalable start on Google Cloud. It enables customers to realize cloud benefits from Day 1 using automation, lean processes, and a robust delivery model. The approach is workload-agnostic and built for enterprise scale.

2. Why Accelerated Onboarding

- 1 • Reduces time and complexity of cloud adoption
- 2 • Establishes strong security and governance early
- 3 • Prevents rework and misconfigurations
- 4 • Enables faster workload migration

3. Four-Stage Onboarding Approach

The onboarding process follows four stages: Business Requirements, Kickoff & Planning, Preparation, and Implementation.

4. Foundation Setup Steps

- 1 • Organization setup: domain verification, super admins, Cloud Identity
- 2 • Identity & access: users, groups, IAM roles
- 3 • Billing: single/multi billing, budgets, alerts, exports
- 4 • Resource hierarchy: org, folders, projects
- 5 • Networking: VPCs, Shared VPC, VPN, firewalls
- 6 • Monitoring & logging: centralized visibility
- 7 • Security: Security Command Center, org policies

5. Automation & Tooling

Google Cloud uses in-console automation via the 10-step Enterprise Onboarding Checklist and the Cloud Foundation Toolkit built with Terraform, Deployment Manager, and Kubernetes Resource Manager.

Automation: In-console Foundation Setup

6. Key Outcomes

- 1 • Faster and secure cloud adoption
- 2 • Enterprise-grade standardized foundations
- 3 • Improved customer experience
- 4 • Migration-ready cloud environment
